

Installation instructions

TVIN 2.0 Sliding system

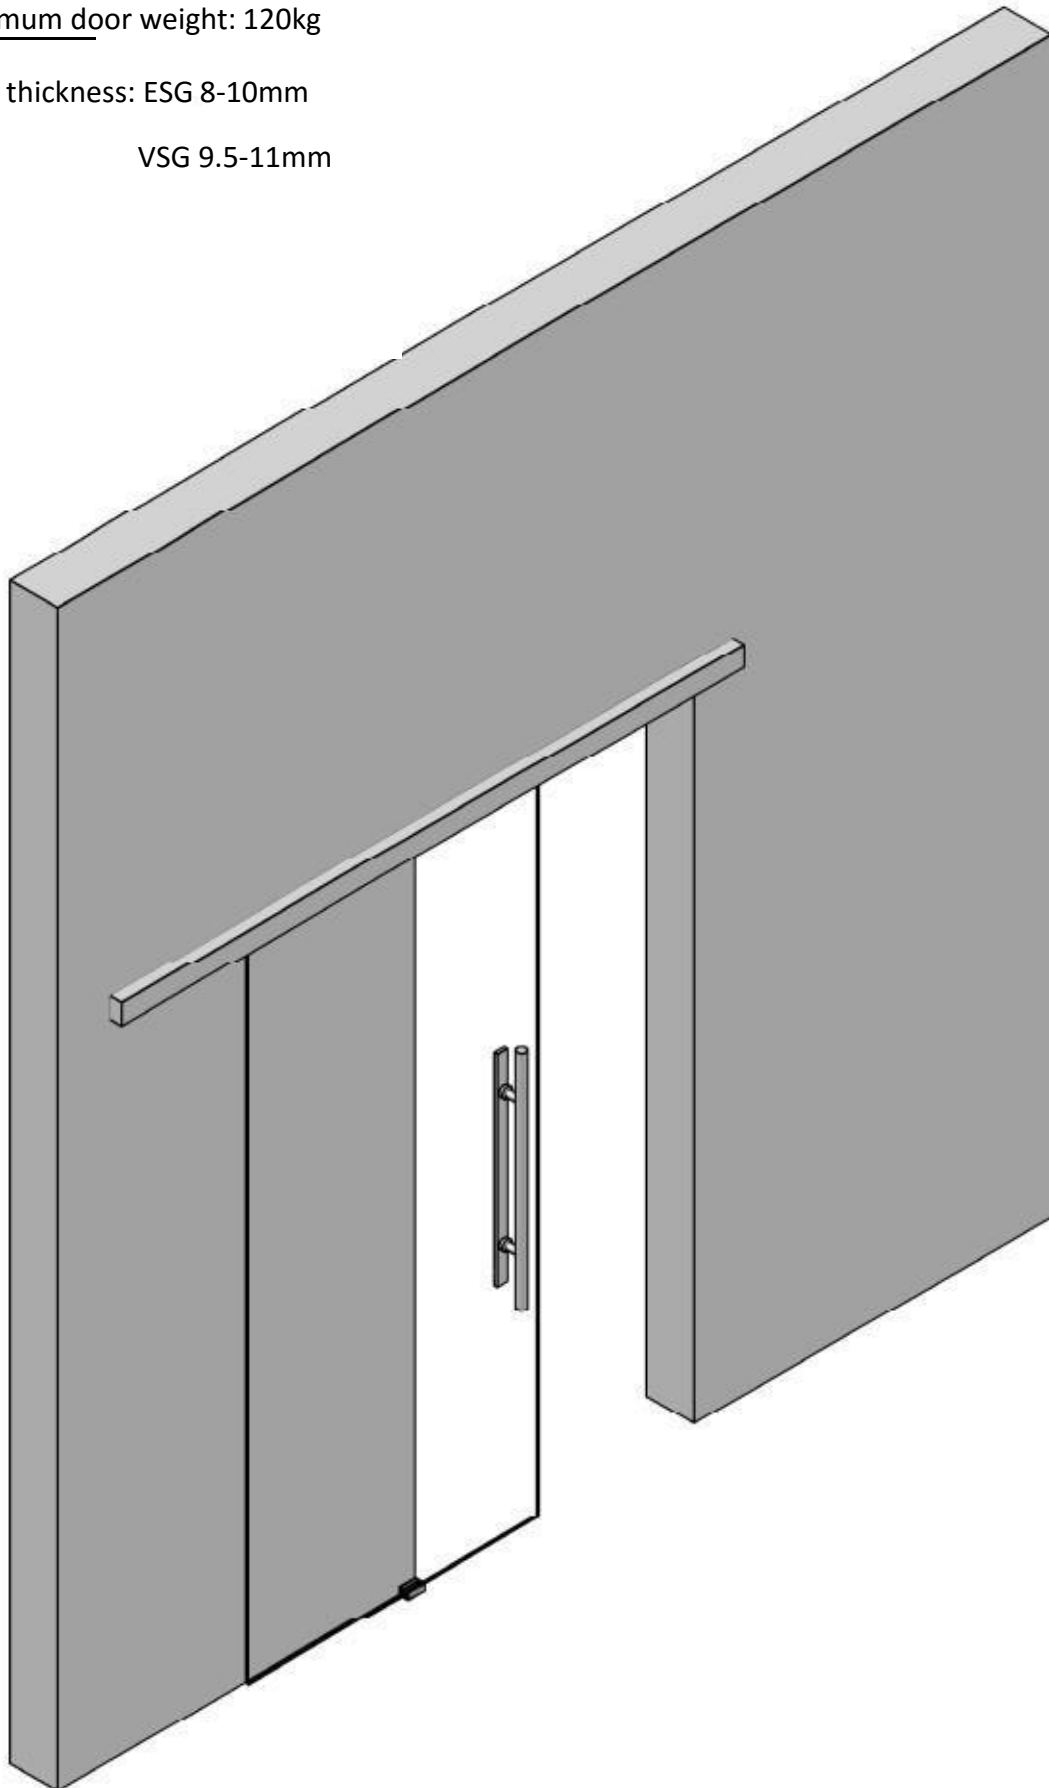

Wall Installation

Information:

Maximum door weight: 120kg

Glass thickness: ESG 8-10mm

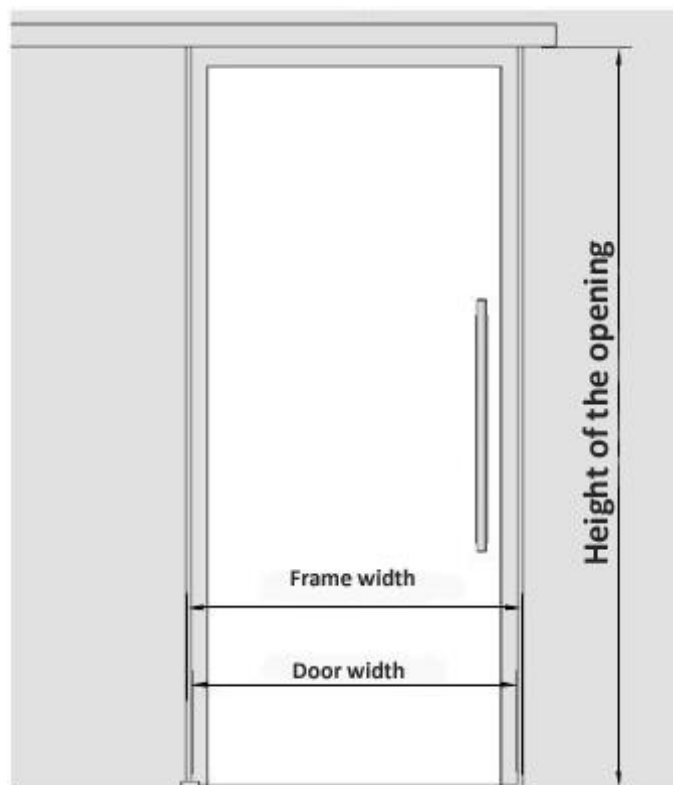

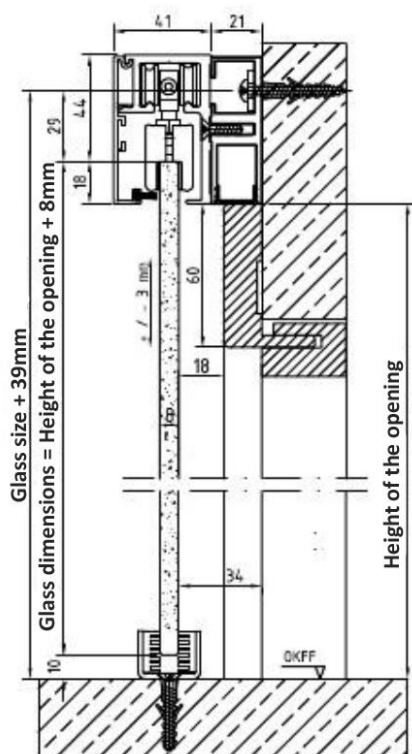

VSG 9.5-11mm

1. Wall installation

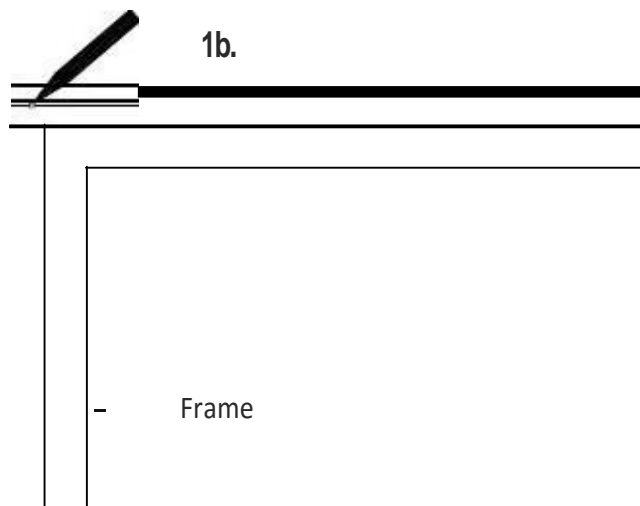

System view

First you have to fit the frame

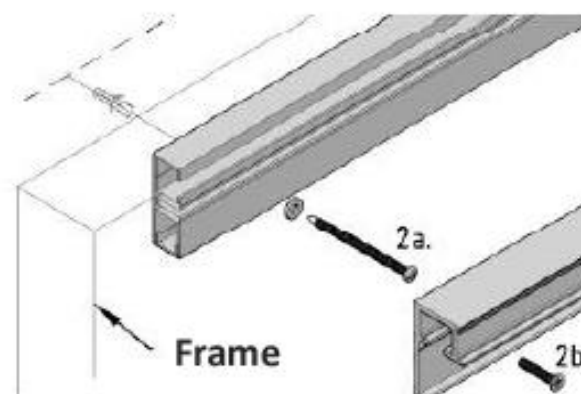

1. Fitting preparation

- Remove the stoppers
- Align the sliding system and mark the holes

2. Fitting the sliding system

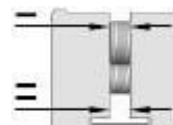

- Fit the system with the screw provided 5 x 60mm
- Install the back of the running track 5 x 20mm
-continue on page 3

3. Fitting the clamps

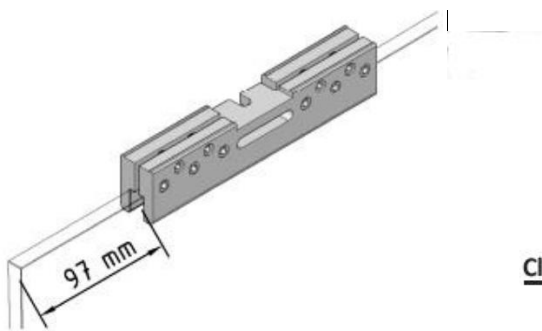

Detail

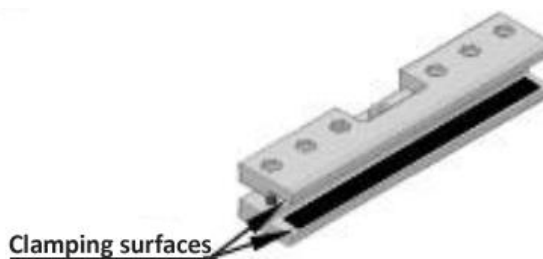

Indications:

- The clamp and surrounding glass must be cleaned with glass cleaner
- The clamp is prepared for 8mm glass
- Other glass thickness can be adjusted by the distance screws
- The clamp must be assembled parallel to the edge of the glass (see details)
- To tighten the clamp on the glass use the Torch Wrench at 6N/m

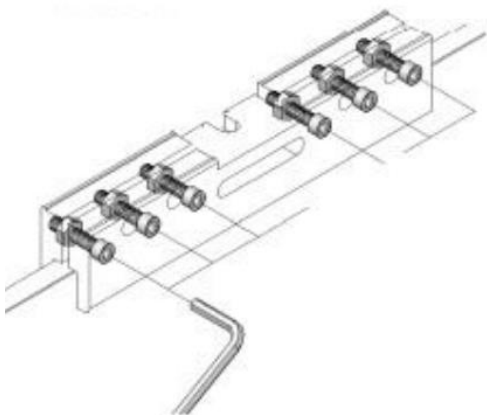

a. Attaching the clamp

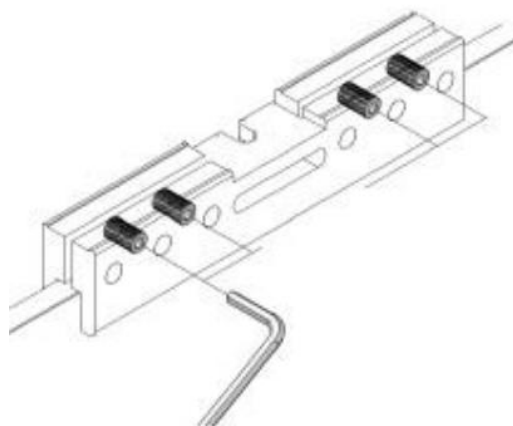

b. Remove the fitting clamp, apply a thin adhesive film on all clamping surfaces and position the fitting clamp on the glass

c. Tighten the screws by hand

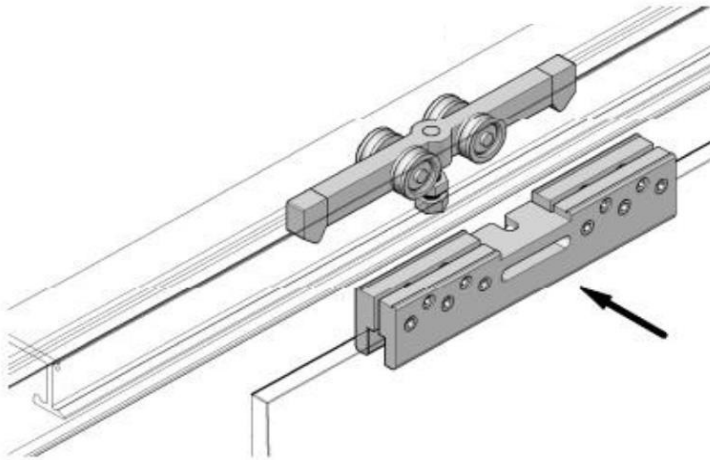

d. Distance clamp screws tighten by hand

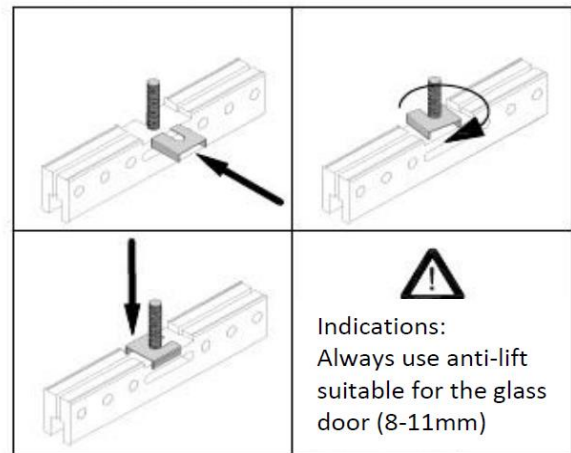

2. Fitting the glass door

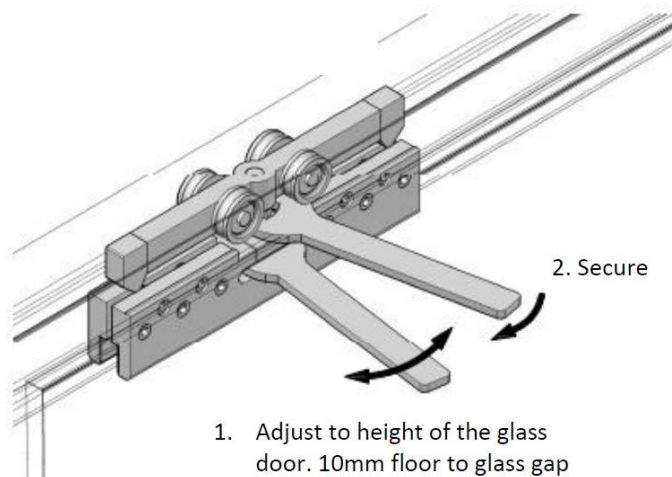

a. Attach the glass door to the running truck

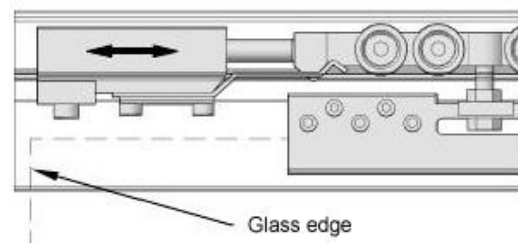

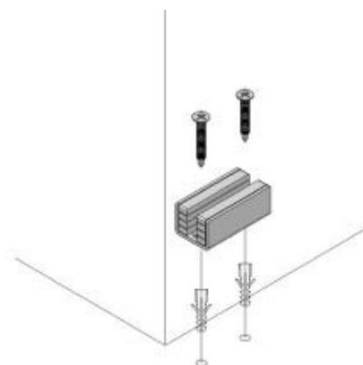

b. Fitting the anti-lift

c. Adjust and secure the door height

d. Fitting the floor guide

3. Fitting the soft closer

a. Insert the soft closer

b. Determine the position of the soft closer.

c. Optional: adapt retention of the feathers

- Loose the screws and insert the required number of distance plates between the feathers and the soft closer

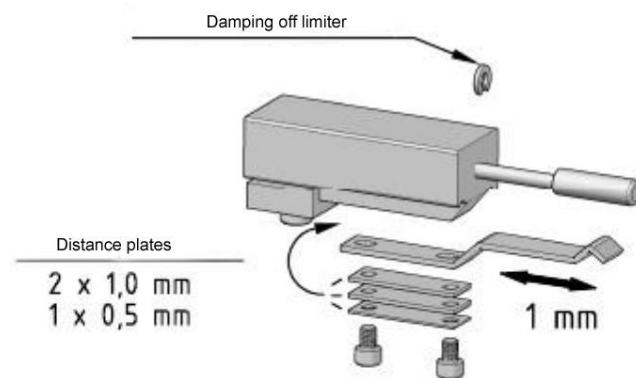

- Adjust the feathers +/- 1mm

d. to prevent any return, clip the damping off limiter on the piston rod.

Note:

Before starting please check the position of the soft closer. The door may not abut against the end caps of the clips panel.

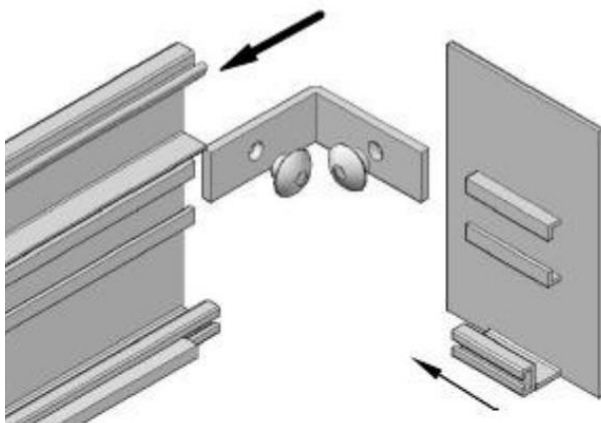

4. Fitting of clip cover

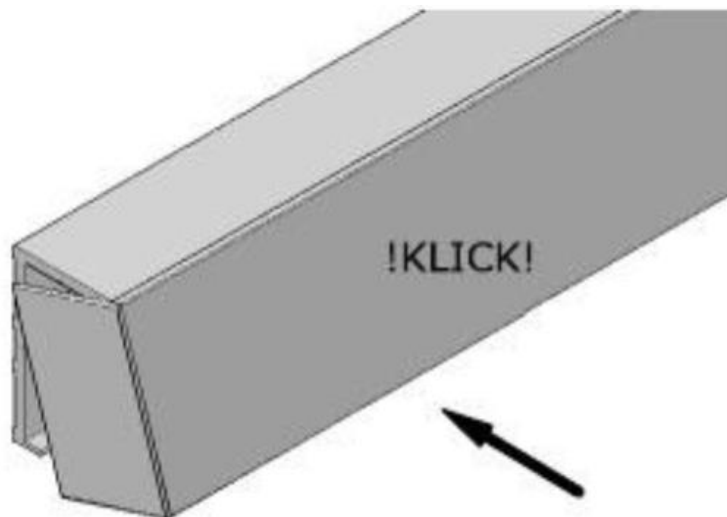

a. fit the brush seal on the movable panel at the clip cover

b. Screw together the end caps

c. Mounting the clip cover

- If you need to open the sliding system (the clip cover), please take a lever (a wooden strip about 70mm wide, see figure below) to help.
